Dictionary Mini Project

Create a program that manages a dictionary of word meanings.The program should allow users to perform the following actions.

1.Add a Word and Meaning :Allow users to add new words along with their meanings to the dictionary

2.Look up a word: Enable users to search for the meaning of a word in the dictionary

3.List all words:Provide an option to display all the words and their meanings currently stored in the dictionary

4.Update Meaning: Implement a feature to update the meaning of an existing word in the dictionary.After updating ,display and the updated meaning

5.Delete a word:Implement a feature to delete a word and its meaning from the dictionary.Confirm the deletion and handle cases where the word doesn't exist

Ensure the program handles invalid inputs gracefully.Use a while loop to keep the program running until user chooses to exit
